                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treatment of auto-immune disease by admin. of peptide(s) corresp. to major histocompatibility complex antigens - esp. for delaying onset of clinical symptoms of insulin dependent diabetes by modulating T cell madiated attack on target cells

Claim 7: Page 20; 24pp; English.

W07512-W07518 represent T-cell modulating peptides that can be used in the method of the invention. These sequences are based on a portion of the major histocompatability complex (MHC) class I antigen (see for the major histocompatability complex (MHC) class I antigen (see involving T-cell mediated destruction of tissue in mammals. These involving T-cell mediated destruction of tissue in mammals. These peptides are used especially to treat insulin-dependent diabetes mellitus, preferably being administered during the pre-clinical stage to delay onset of the disease. Other diseases that can be treated are multiple sclerosis, rheumatoid arthritis, psoriasis, pemphigus vulgaris, sjourist, etc. The peptides modulate T-cell mediated attack on autologous target cells, and may also reduce inflammation, swelling, and release of
                                              Claim 13; Page 66; 80pp; English.

This sequence represents a fragment of a class I major histocompatibility complex (MHC) antigen. This sequence corresponds to residues 75-84 of the alpha-1 domain of the class I MHC HLA-B7. This sequence, and the peptide fragments represented by R83062-R83085, R83090-R83096 and P82907-R82913 can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of period of time (compared to the lifetime administration for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic T lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              04-AUG-1997 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B7. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (comparate to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CLLs)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             16-MAY 1996 (first entry)
HLA-B7 CTL modulating peptide (B7.84-75/75-84).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

PUT Immunomodulating dimer peptide(s) - based on a Class I HIA-B
alpha-1 domain, used for preventing rejection of transplants or
treating autoimmune diseases.

Frample 1: Page 19: 41pp: English.

Example 1: Page 19: 41pp: English.

Peptides W33784-98 and W33778-9 were assayed for their immunomodulating
activity. A peptide-type compound or variant is claimed which has
climmunomodulating activity, including the N-terminal acjated and/or
immunomodulating activity, including the N-terminal acjated and/or
c-terminal amidated or esterified forms of up to 60 amino acids, where
the peptide-type compound comprises the formula; A-B, where A, B =

C-terminal amidated or esterified forms of up to 60 amino acids, where
the peptide-type compound comprises the formula; A-B, where A, B =

C-terminal amidated or esterified forms of up a81-a hydrophobic or
and any peptide type bond within the brackets. The compounds comprise
acid. The sequences related to a Class I HiA-B alphal domain (positions)
acid. They can be used to inhibit cytotoxic T-lymphocytes (CTL) from
undesirably attacking cells in a host or in vitro. They can also be
used in combination with antigenic peptides or proteins of interest to
activate CTLs. They can also inhibit the proliferation of T cells in
response to anti-CD3. The peptide can be used for preventing rejection
of transplants or for treating autoimmune diseases, e.g. diabetes,
cused for detection and diagnosis. The products can also be
conserved.

New immunomodulating dimer peptide(s) - based on a class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases

Example 1; Page 19; 41pp; English.

Example 1; Page 19; 41pp; English.

Peptides W33784-98 and W33778-9 were assayed for their immunomodulating activity, including the N-terminal acylated and/or C-terminal acylated and/or C-terminal acylated and/or C-terminal anidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B - (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 - E or V; aa77 - D, S or N; aa79 - R or G, aa80 - I or N; aa81- a hydrophobic or small amino acid; aa82 - R or L; aa83 - G or R; and aa represents amino acid. The sequence in the brackets may optionally be absent or truncated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       at any peptide type bond within the brackets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The Model of the M
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                HLA-Bw62 CTL modulating peptide (Bw62.60-84).
Cytocoxic T lymphocyte; CTL; major histocompatibility complex; MHC;
immnosuppressant; graft versus host disorder; transplantation; therapy;
class I MHC; HLA-Bw62.
    (positions
amino acid sequences related to a class I HLA-B alphal domain (position 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of I cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autolimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis. The products can also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          15-MAR-1994 (first entry)
Peptide fragment of Class I HLA peptide.
Human leukocyte antigen; HLA; peptide; transplantation; neoplasia;
parasitic disease; cytotoxic T lymphocyte; modulation.

                                                                                                                                                                                                                                                                  Example 13; Page 32; 80pp; English.
R83061-R83085, R83090-R83096 and R92207-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HIA-BW62. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched domor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CILS) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HLA-B7.60-64.

R95413, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigans. This sequence represents the human-leucocyte-associated antigans. This sequence represents the HLA-Bw62.60-84. These sequences can be used to isolate the protein p74 cross reactive with the heat shock protein p74 is associated with T-cell activation in mammalian T-cells, and is also membrane protein exclusion associated with T-cell activation in mammalian T-cells, and is also membrane protein exclusion associated with T-cells p74 can be isolated by lysis of a suitable cell with an amphoreric detergent, and then passed through an affinity column containing a compressing the extracellular fragment of p74 combined with HLA-B2702.60-84 (see R95416), induces calcium influx, and inhibits compounds can be screened for their effect on the cytolysis. Candidate compounds can be screened for their effect on the cytolytic activity of compounds the amount of binding between the candidate composition containing the amount of binding between the candidate composition containing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, induce containing the p74 indand composition of with p74 for the binding of the p74 ligand.

Claim 9; Rage 53; 61pp; Engilsh.

The peptide (or a fragment of at least 10 amino acids, joined at at least one terminus to a sequence other than that of wild type HLA antigen) is used to modulate cytotoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and neoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which beind to it and removing subsets of CTLs from a T-cell composition.
                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                           W-PSDB; 012115.

HLA-B35 gene - used in DNA probe and transformant cells for immunising animals, for developing monoclonal antibody.

Claim 1; Page 1; Hpp; Japanesse.

Probes comprising part of the sequence encoding this sequence can be used to identify class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HLA-B35 antigen. See also J03112485 and J03112487.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              15-MAR-1994 (first entry)
Peptide fragment of Class I HLA peptide.

C Tolaim i Page i; 11pp; Japanese.

C Probes comprising part of the sequence can be used to identify Class I genes. The DNA can be expressed for immunisation of canimals and prodn. of monoclonal antibodies specific for the HAA-B35 antigen. Sealso J03112485 and J03112487.

Proposed For Garden Coding one or more cistron(s) which express

Time HIA-B7 antigen encoding plasmid was developed to incorporate many
advantageous features, eg. the kanamycin resisitance gene. The

cradication of two open reading frames encoding portions of SV40 viral

proteins lowers the risk of tumourigenicity. The vector may also operate

as a cassette into which cistrons may be inserted and removed at will

for the transcription and subsequent translation of peptides of interest.

The vector is used partic. for the treatment of neoplastic disease,

in vivo.

New vectors for gene therapy, partic for tumours - comprising

PPT genetic material encoding one or more cistron(s) which express

PPT immunogenic or therapeutic peptide(s)

PPT genetic material encoding one or more cistron(s) which express

PPT genetic material encoding one or more cistron(s) which express

PPT genetic material encoding the plasmid so the plasmid by the plasmid sequence deriv. From the bovine growth bornone

CC cap-dependent protein start site. Translation of the plasmid in posterial cells is controlled by the plasmid in paterial cells is controlled by the presence of a bacterial origin of replication. The vector is used partic. for the treatment of neoplastic for in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         HLA-C gene, DNA probe and transformant cells - for immunisation of animals and monoclonal antibody development.

Claim 1; Page 1; 13pp; Japanese.

Probes comprising part of the sequence can be used to identify class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HLA-C anitigen. detaxification of metabolites, particularly aflatoxins

laim 2: Fig 8: Jipp; German

This sequence encodes a novel protein designated CPRM2 (chemoprotector coulated modifier) that inhibits the effects of genotoxic and/or regulated modifier) that inhibits the effects of genotoxic and/or cytotoxic substances. The invention describes the isolation of CPRM1, CPRM3, mcPRM1, allele s. dam dCPRM1, allele r. Transformants containing such proteins are used to produce recombinant proteins and uncleic acids for use in gene therapy and to raise antibodites which are used to (1) detaxify geno - and/or cyto-toxic metabolites and (11) detect presence of CPRM proteins (or nucleic acid encoding them, including presence of CPRM proteins and used to eliminate carcinogenic aflatoxins and to treat neurodegeneration, e.g. Alzheimer's disease, associated with production of malondiadenyde, a toxic product or the cyclo-oxygenase reaction and prostaglandin metabolism.

Claim 2; Page 6; 7pp; Japanese.

This sequence represents the coding sequence for the Cuphea leptopoda acyl-ACP-thiosesterase (AAT). This sequence was isolated by synthesising a AAT cDNA, and using that sequence to probe for a fragment of the AAT gene, which was then amplified. AAT is a key enzyme in the synthesis of middle chain aliphatic acids, and as such is useful in pharmaceutical preparations, and foods.

Sequence 1490 BP; 351 A; 332 C; 402 G; 405 T;
chemoprotector regulated modifier that inhibits the effects of genotoxic and/or cytotoxic substances. The invention describes the isolation of CPRMI, CPRMI, CPRMI, allele s, and mCPRMI, allele r. Transformants containing such proteins are used to produce recombinant proteins and nucleic acids for use in gene therapy and to metabolites and including detect presence of CPRM proteins (or nucleic acid encoding them, including detection of mutations indicative of increased risk of cancer, e.g. prenatally). The proteins can be used to eliminate acrinogenic aflatoxins and to treat neurodegeneration, e.g. Alzheimer's disease, associated with production of malondialdehyde, a toxic product or the cyclo-oxygenase reaction and prostaglandin metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cuphea leptopoda; aliphatic acid synthesis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding Cuphea leptopoda Hemsl. acyl-ACP-thio:esterase - for synthesis of middle chain aliphatic acids, useful in pharmaceutical

DNA encoding calcium-activated potassium channel - useful in assays
to identify compounds which increase or decrease potassium ion flux
Claim 3; Page 112; 151pp; English.

Claim 3; Page 112; 151pp; English.

Chis sequence encodes the human small conductance calcium-activated
This sequence encodes the human small conductance calcium-activated
Corpussium channel protein 3 (h8X3) of the invention. The proteins of the
invention are monomers of a calcium-activated potassium channel, where
Corpus and (ii) has a calculated molecular weight of between 10 and
Corpus and (ii) has a unit conductance of between 2 and 60 pS when the
monomer is in the functional polymeric form of a pocassium chain and is
expressed in a Xenopus occyte. Antibodies specific for the protein, and
Corpus specific for the DNA can be used to detect the presence of the
Corpus specific for the DNA can be used to detect the presence of the
Corpus and so be used for the recombinant production of the protein. The
DNA sequences can also be used for the recombinant productions in the SK and IK
Genes in a computer system. The proteins encoded by the SK and IK
Genes in a computer system for determining their three dimensional
corpus and the corpus of the protein of the protein. The protein of the protein of the protein of the corpus of the corpus of the corpus of the computer system for determining their three dimensional
corpus of the corp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
DNA encoding calcium-activated potassium channel - useful in assays

To identify compounds which increase or decrease potassium ion flux

to identify compounds which increase or decrease potassium ion flux

Claim 3: Page 105: 151pp; English.

Claim 3: Page 105: 151pp; English.

Chis sequence encodes the rat small conductance calcium-activated

Conductance calcium-activated proteins of the invention are monomers of a calcium-activated potassium channel, where the monomer: (i) has a calculated molecular weight of between 2 and 60 ps when the monomer is in the functional polymeric form of a potassium chain and is monomer is in the functional polymeric form of a potassium chain and is capressed in a Xenopus socyte. Antibodies specific for the protein, and protein or DNA sequences in a sample. Host cells expression of the protein can be used for the recombinant production of the protein. The content or DNA sequences in a sample host cell can also be used for the recombinant production of the protein. The cell can also be used for determine mutations in the SK and IK genes in a computer system. The proteins encoded by the SK and IK genes in a computer system. The proteins encoded by the SK and IK genes can also be used for determining their three dimensional proteins which is useful for determining ligands that bind to the
                                                                                                                                                                                                                                                             01-OCT-1998 (first entry)

to identify compounds which increase or decrease potassium ion flux

Claim 3: Page 123-124: 151pp; English.

This sequence encodes the rat small conductance calcium-activated
potassium channel protein 3 (rsS3) of the invention. The proteins of the
invention are monomers of a calcium-activated potassium channel, where
the monomer: (i) has a calculated molecular weight of between 40 and
80 kDa; and (ii) has a unit conductance of between 2 and 60 ps when the
monomer is in the functional polymeric form of a potassium chain and is
expressed in a Xenopus cocyte. Antibodies specific for the protein, and
probes specific for the DNA can be used to detect the presence of the
protein or DNA sequences in a sample. Host cells expression of the
protein can be used in assays to identify compounds which increase or
protein also be used for the recombinant production of the protein. The squences can also be used for determine mutations in the SK and IK
genes in a computer system. The proteins encoded by the SK and IK
can be used in a computer system for determining their three dimensional
can be used in a computer system for determining that three dimensional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DNA encoding calcium-activated potassium channel - useful in assays to identify compounds which increase or decrease potassium ion flux claim 3; page 128-129; 151pp; English.

This sequence encodes the human small conductance calcium-activated potassium channel protein 3 (hSK3) of the invention. The proteins of the invention are monomers of a calcium-activated potassium channel, where the monomer: (i) has a calculated molecular weight of between 40 and 80 kDa; and (ii) has a unit conductance of between 2 and 60 pS when the monomer is in the functional polymeric form of a potassium chain and is probes specific for the DNA can be used to detect the presence of the protein or DNA sequences in a sample. Host cells expression of the protein can be used in assays to identify compounds which increase or

decrease the potassium ion flux through the protein. The transfected host cell can also be used for the recombinant production of the protein. The DNA sequences can also be used for determine mutations in the SK and IK genes in a computer system. The proteins encoded by the SK and IK genes can be used in a computer system for determining their three dimensional structure, which is useful for determining ligands that bind to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human small conductance calcium activated potassium channel.3 useful for diagnosis, treatment and prevention of particularly useful for diagnosis, treatment and prevention of particularly schizophrenia and bipolar disorders

Claim 3; Figure 5; 95pp; Bnglish.

Cloandarcance calcium-activated potassium channel.3 (hKCa3/KCNN3) comprise neuropsychiatric, neurological, neuromuscular and immunological disorders, specifically bipolar disease and schizophrenia. Transgenic animals comprising the hKCa3/KCNN3 gene as a transgene in their somatic and germ cell lines can be used as models for studying these conditions and their treatments.

C Antibodies (Ab) directed against the hKCa3/KCNN3 polypeptide can be used to conservative variants of the polypeptide can be used to detect those at risk from these disorders and also in therapy against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human small conductance calcium activated potassium channel gene. Human small conductance calcium activated potassium channel; hKCa3/KCNN3, bipolar disease; schizophrenia; treatment; diagnosis; detection; transgenic animal; gene therapy; neuropsychiatric disorder; neurological disorder; neuromuscular disorder; immunological disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               such disorders. Use of the wild type gene in gene therapy to treat these disorders is also contemplated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Location/Qualifiers

                                                                                                                                                                             Prepared acids encoding human secreted proteins - obtained from the nucleic acids encoding human secreted proteins - obtained from type and libraries derived from umbilical cord, lymph ganglia, I brace derived from umbilical cord, lymph ganglia, I brace sand placental itssue claim 1; Page 268-269; 411pp; English.

X41379 to X41526 represent 5' expressed sequence tags (ESTS) for human secreted proteins, and encode the proteins given in Y12521 to Y12668, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producting secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiating activity, haematopoiesis regulating activity, tissue growth regulating activity, nemotocitive hormone regulating activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/content activity, manifulammatory activity, tumour inhibition activity and chromosome mapping promoter sequences. The nucleic acids encoding the signal peptide can be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide or the insertion of a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human: secreted protein, EST: expressed sequence teg; diagnosis; forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopoiesis regulation; tissue growth regulation; reproductive hormone regulation; chemotactic; chemokinetic; haemostatic; thrombolytic; antiinflammatory; tumour inhibition; antitumour; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         22-JUN-1999 (first entry)
